Base cabinets are designed on a "unit" system to allow maximum flexibility in the selection of drawer and/or cupboard door sizes.

Standing height cabinets (35" high) have an opening 60 "units" high. Sitting height cabinets (29" high) have an opening 48 "units" high. ADA height cabinets (32" high) have an opening 54 "units" high. This means that any combination of drawer and cupboard door heights equaling 60, 54 or 48 units can be used in a base cabinet.

Mobile standing height cabinets (33" high) have an opening 56 "units" high. Mobile sitting height cabinets (26 1/4" high) have an opening 42 "units" high.

The adjacent tables indicate the "unit" height and inside clearance of the Inset style base cabinets shown in this catalog. Simply match the unit number shown on the cabinet drawers and cupboard to the appropriate number in the tables.

# Steel Apron Assemblies

## Components of an Apron Assembly

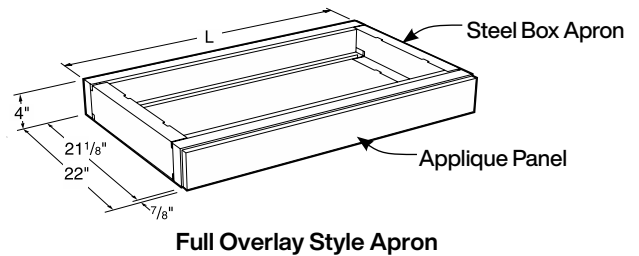

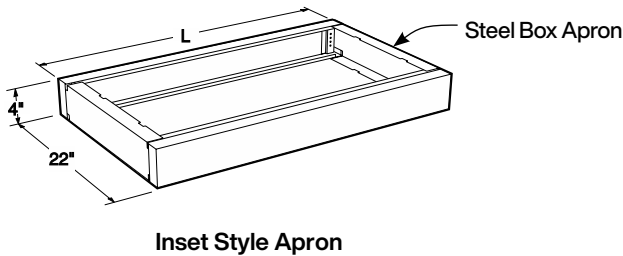

## Specifications:

Box Aprons are 4" high in lengths and depths as shown. Dimensions shown are sizes of the apron without legs. Each leg or pedestal adds 2" to the overall length of the apron assembly. A free-standing table with legs on both ends will therefore be 4" longer than the apron length.

All aprons can be used between cabinets, with leg assemblies or with pedestal legs.

For aprons 42" long and longer, spreaders are available to connect the two leg assemblies. When a spreader is used, order the A08 or A28 leg assembly which are designed to accept the spreader.

# Steel Apron Assemblies

## Components of an Apron Assembly

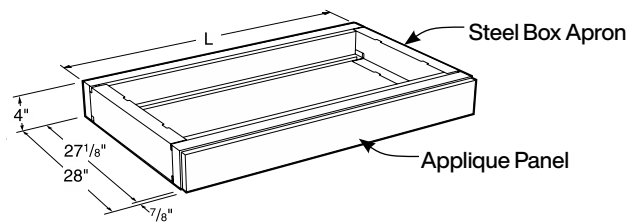

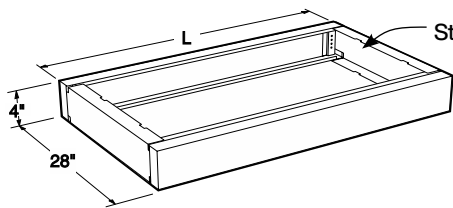

## Specifications:

Box Aprons are 4" high in lengths and depths as shown. Dimensions shown are sizes of the apron without legs. Each leg or pedestal adds 2" to the overall length of the apron assembly. A free-standing table with legs on both ends will therefore be 4" longer than the apron length.

All aprons can be used between cabinets, with leg assemblies or with pedestal legs.

For aprons 42" long and longer, spreaders are available to connect the two leg assemblies. When a spreader is used, order the A08 or A28 leg assembly which are designed to accept the spreader.

# Wall Shelving Assemblies

## Specifications:

**Vertical Uprights** are 1¼" deep and either 79" or 42" high. They are manufactured with a double-slotted face with slots on 1" centers. They are designed to be mounted between two Support Rails to hold accurate spacing.

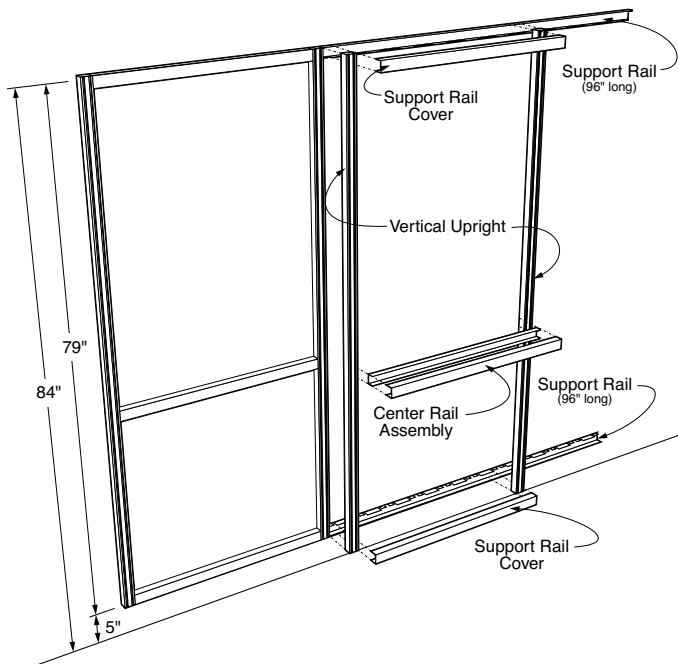

**Support Rails** are available in 8 foot

lengths and may be cut to the required length. Support Rails are notched on 6" centers to accept the Vertical Uprights.

**Support Rail Covers** are required to finish the assembly and must be ordered in pairs to match the Vertical Upright spacing.

**Optional Center Rails** may be ordered to provide a horizontal member at counter top height. They should be sized to match the Vertical Upright spacing.

# Kemresin Tub Sinks & Drain Troughs

Kemresin® Tub Sinks and Drain Troughs are made from a combination of modified epoxy resins, upgraded for maximum properties with carefully selected curing resins and inert fillers to produce a thermosetting material. They are formed in metal molds to provide one-piece units with covered corners and bottoms pitched to the drain outlet. After being removed from the molds, they are cured at high temperatures for

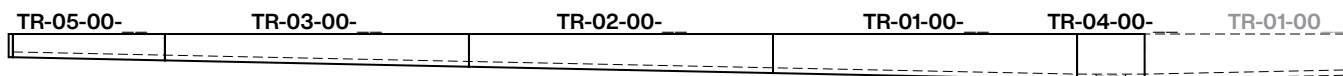

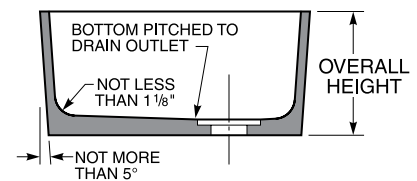

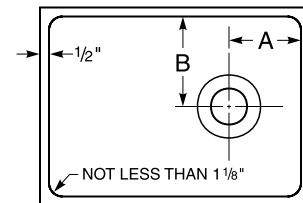

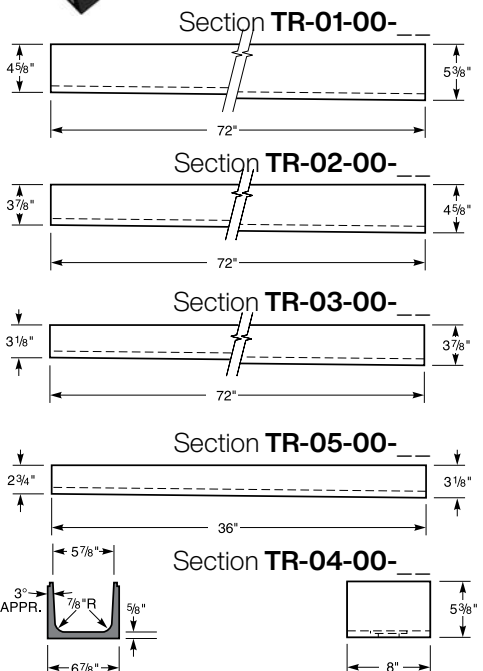

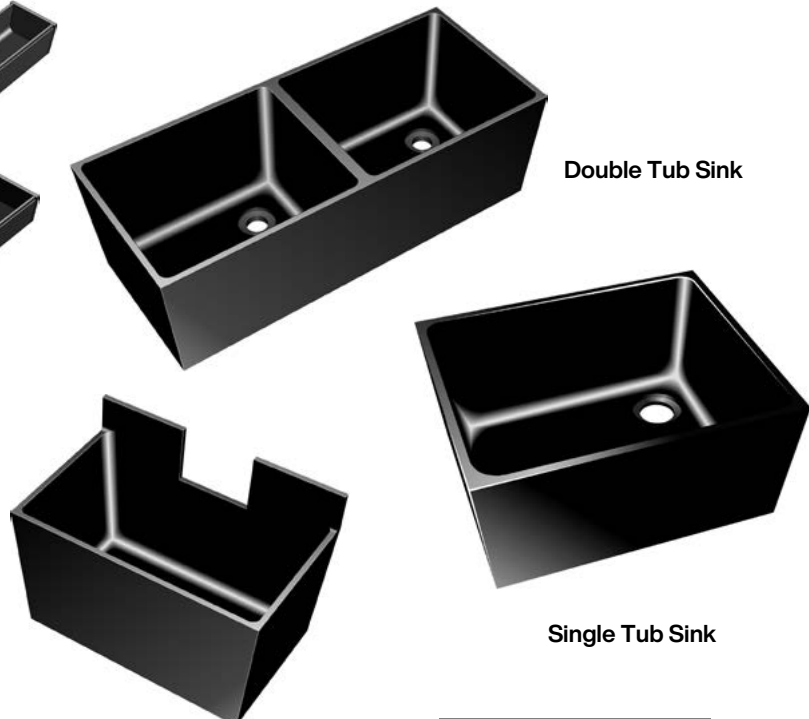

several hours to complete the chemical reaction, and ensure maximum chemical, impact and thermal shock resistance. Drain outlets are sized for 1/2" sink outlets unless otherwise specified.

Kemresin Drain Troughs are molded with no longitudinal joints. A slope of 1/8" per foot assures complete drainage, and a 7/8" cove radius in the bottom corners is provided for ease of cleaning.

Five trough sections, or any part of them, are available to be cemented together to provide Open End Troughs up to 21' long, Closed End Troughs with an end drain outlet up to 21'-8" long and Closed End Troughs with a center drain outlet up to 42'-8" long. Section TR-4 is provided with a center drain recess for a standard 1/2" sink outlet.

### General Notes:

- Sinks with center drain outlets, except 1011-00, can be furnished with a drain recess sized for a crumb cup strainer or garbage disposal when specified.
- Any sink may be furnished with trough cutout. Specify location and size. (Trough location must be at least 1/2" from inside corner and 2" from bottom.)
- Most sinks can be joined together to form multiple tub sinks provided adjoining sides of sinks are the same size. Sinks longer than 30", wider than 24" or deeper than 12" cannot be factory joined, but they can be factory prepared for field assembly. Assemblies of three or more tub sinks should be no longer than 60" overall. For longer assemblies, one factory joint can be made with a second joint prepared for field assembly.

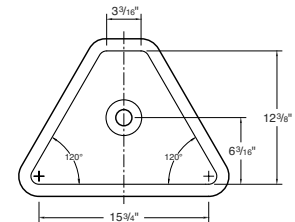

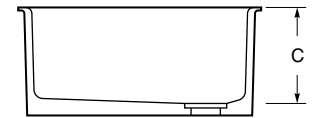

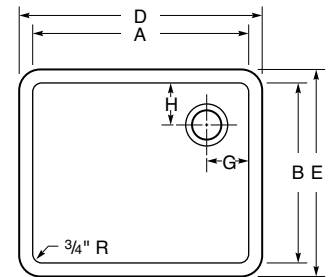

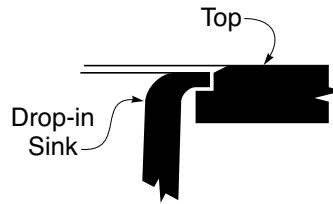

# Kemresin Drop-in Sinks

Kemresin Drop-in Sinks are formed in metal molds to provide a lipped one-piece tub with coved corners and bottoms pitched to the drain outlet. They are made from a combination of modified epoxy resins, upgraded for maximum properties with carefully selected curing resins and inert fillers to produce a thermosetting material.

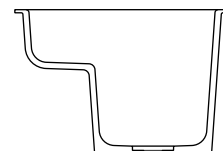

After being removed from the molds, they are cured at high temperatures for several hours to complete the chemical reaction, and ensure maximum chemical, impact and thermal shock resistance. Drain outlets are sized for 1/2" sink outlets unless otherwise specified.

They are designed to be mounted in Kemresin tops in a specially rabbetted cutout so that no support from below is required.

# Stainless Steel Drop-in Sinks

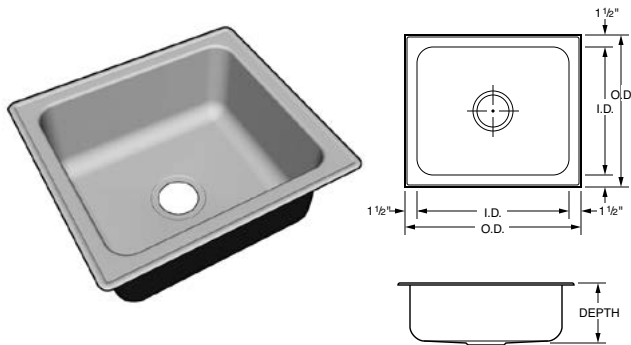

Seamless die-drawn from nickel bearing type 304, 18-8, 18 gauge stainless steel. Allows easy cleaning and stain resistance. Interior and top surfaces polished to a gleaming finish with a highlighted bowl rim. Corners and bottom turns are radiused 1 $\frac{3}{4}$ ". Sinks are thoroughly sound deadened

with environmentally safe compounds, to ensure proper sound insulation and to reduce condensation.

All sinks are self-rimming with stainless steel mounting channels for easy, top mount, snap-in clip installation. Sinks are compatible with any type work-surface material from  $\frac{3}{4}$ " to 2 $\frac{1}{2}$ " thick.

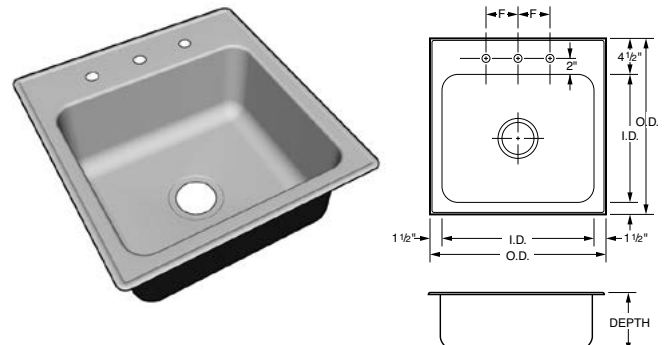

Each sink is center punched to receive a standard cup strainer. ADA compliant sinks are punched in the center, 4-1/2" from the rear of the bowl for extra clearance.

# Lock Schedule Sample and Examples

## Lock Schedule Examples

### Keyed Different & Masterkeyed

An example of a simple lock schedule with disk tumbler locks. All locks on the project are keyed different with a single master key that can open all locks. Either disk tumbler or pin tumbler locks could be used for this arrangement.

### Keyed Alike in Sets

An example of another simple lock schedule with disk tumbler locks. On this project all the locks in each room are keyed alike, but each room is different from the other. A master key could be used in this type of keying arrangement, but in this example it is not. Either disk tumbler or pin tumbler locks could be used for this arrangement.

### Keyed Different – Masterkeyed & Grand-Masterkeyed

An example of a more complex lock schedule with pin tumbler locks. All locks are keyed different, with a separate master key for each room, and a grand-master key for the entire project. This keying arrangement could not be used with disk tumbler locks.
